

U.S. Army Awards \$5B, 10-Year Contract to Sterling Computers

Experienced Technology Solutions Provider Wins Army Desktop and Mobile Computing Contract

North Sioux City, SD, August 2, 2019 – Sterling Computers, an industry-leading technology solutions provider and one of the prime IT contractors to the Federal Government, is one of only eight winners of the five-billion-dollar Army Desktop and Mobile Computing 3 (ADMC-3) Contract.

The ADMC-3 Contract is the U.S. Army’s primary source for commodity purchases of commercial off-the-shelf IT products including desktops, laptops, tablets, printers, and other multifunction devices to integrate, support, modernize, and refresh the Army’s IT equipment and services for today and the future.

A total of 58 companies contended for the contract, and only eight were awarded—Sterling being one of the top recipients along with Dell Technologies.

This award showcases Sterling’s continuous excellence in providing technology services to the Federal Government. Sterling’s President and CEO Brad Moore states, “Sterling is thrilled to be able to support and partner with the U.S. Army. Sterling has been one of the most successful providers of IT products and services across our contracts like NETCENTS-2, SEWP, and CIO-CS. We are looking forward to bringing that value forward to support the Army.”

Moore signifies how eager Sterling is to start working with the Army to procure all its off-the-shelf IT products. In addition, Sterling can satisfy all the Army’s client service needs such as: imaging, asset tag/UID labels, custom delivery, installation/deinstallation, break/fix, and laser engraving from three Configuration, Integration, and Distribution (CID) Centers located in: North Sioux City, SD; Sacramento, CA; and Dulles, VA.

About Sterling | www.sterlingcomputers.com

Sterling is an award-winning technology solutions provider with over two decades of helping customers solve the most complex requirements of their IT environments. Sterling provides customers with a simplified IT experience by being their single point of contact for all their solutions architecture, proof of concept, product fulfillment, and technology adoption needs. Additionally, they provide cybersecurity solutions for hybrid, multi and public cloud environments and data centers, helping turn every *What If* into reality.
